

roer en trimtab krachten en momenten

JAL 6-3-2018

$$O_{pp} = c_r \times l_r$$

$$A.R. = \frac{l_r}{c_r}$$

raakhlyn aan liftcurve

$$\frac{dCl}{d\alpha_r} = \frac{5,7}{1 + \frac{2}{A.R}}$$

Lift kracht op roerblad $\alpha_r = \text{angle of attach roer}$

$$L_r = \frac{1}{2} \cdot \rho_m \cdot V^2 \cdot c_r \times l_r \times \frac{dCl}{d\alpha_r} \times \alpha_r \quad [N]$$

\uparrow
 1000 kg/m³

\uparrow
 in radiale

$$\text{koppel t.o.v. roeras} = L_r \times l_1 \quad [Nm]$$

(Letcher: eigen roer "volume" = $c_r \times l_r \times l_1$)

$$O_{pp_t} = c_t \times l_t$$

$$A.R. = \frac{l_t}{c_t}$$

raakhlyn aan liftcurve tab

$$\frac{dCl}{d\alpha_t} = \frac{5,7}{1 + \frac{2}{A.R}}$$

$\alpha_t = \text{angle of attach tab}$

Lift-kracht op trimtab.

$$L_t = \frac{1}{2} \rho_m \cdot V^2 \cdot c_t \cdot l_t \cdot \frac{dCl}{d\alpha_t} \times \alpha_t \quad [N]$$

$$\text{Koppel t.o.v. roeras} = L_t \times l_2 \quad [Nm]$$

(Letcher: tab "volume" = $c_t \cdot l_t \cdot l_2$)

$$\text{By evenwicht: } L_r \cdot l_1 = L_t \cdot l_2$$

Gegevens van de Maersvin

2

$$\text{roer opp.} = 0,97 \times 0,33 = 0,32 \text{ m}^2$$

$$AR = \frac{0,97}{0,33} = 3$$

$$\frac{dcl}{d\alpha r} = 3,42$$

$$l_1 = 0,225 \times 0,33 = 0,0745 \text{ m}$$

$$L_r = \frac{1}{2} \cdot \rho_m \cdot V^2 \cdot 0,32 \cdot 3,42 \cdot \alpha r$$

Aanname trinitab afmetingen

$$0,9 \times 0,1$$

$$\text{tab opp} = 0,9 \cdot 0,1 = 0,09 \text{ m}^2$$

$$AR = 9$$

$$\frac{dcl}{d\alpha t} = 4,66$$

$$l_2 = 0,35 \text{ m}$$

$$L_t = \frac{1}{2} \rho_m \cdot V^2 \cdot 0,09 \cdot 4,66 \cdot \alpha t$$

$$\text{Evenwicht } L_r \cdot l_1 = L_t \cdot l_2$$

$$\text{delen door } \frac{1}{2} \rho_m \cdot V^2$$

$$1,094 \times 0,0745 \cdot \alpha r = 0,419 \times 0,35 \cdot \alpha t$$

$$\alpha t = 0,55 \cdot \alpha r$$

Stel gewenst $\alpha r = 10$ graden $\left(= \frac{10}{57,3} = 0,175 \text{ rad} \right)$

dan wordt dat bereikt met een

$$\alpha t = 0,55 \times 10 = 5,5 \text{ grad} \quad \left(0,55 \times 0,175 = 0,096 \text{ rad} \right)$$
